

HPC-500

HPC-500 Series Cylindrical Probes for Precision Dimensional Measurement

Capacitec's HPC non-contact probes are our most popular line of capacitive sensors. The sensor and guard elements are provided in a protective metal case. The HPC family of probes supports cable lengths of up to 10 meters in standard applications.

Built in wrench flats allow for easy installation and adjustments. A set screw or split clamp housing typically holds the assembly in place for easy installation and adjustments. Capacitec also offers custom configurations. Please consult the Capacitec technical support team for more information.

These probes have the largest displacement to sensor diameter ratio in the industry, yielding twice the linear range of competitors.

HPC cylindrical probes are available in a wide operational temperature range for precise measurements from cryogenic to 1000°C.
